How to set the IP address - Camera.....	8

Before you start

The material you need

- PC or Laptop with Pentium processor (Dual-Core or higher recommended)
- GigE interface
- Cable to connect the camera to this interface
- Power supply unit for the GigE camera
- A C or CS-mount lens

Please make sure that you have

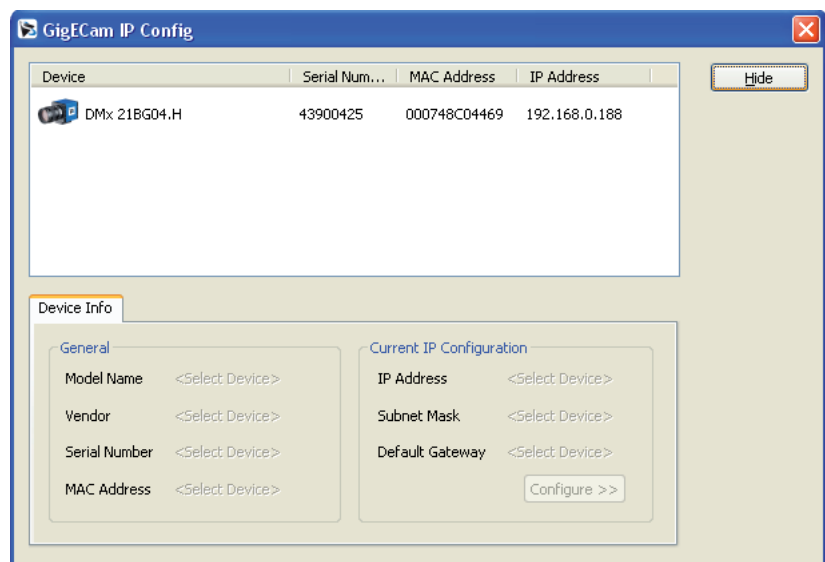

- setup Windows XP/SP2, Windows Vista or Windows 7
- setup DirectX 9.0c or higher
- connected a power supply unit to the camera
- setup a GigE interface
- connected the camera to this interface

Software

Please insert the included CD and click **English** in the 1st, **Software installation** in the 2nd, **Driver** in the 3rd and **GigE Camears** in the last dialog. Now this Icon should appear in the taskbar:

Please click the icon to open the dialog on the right. The installation was successful if your camera appears similar to the camera shown in this dialog. In case of any problem, please proceed with the next section.

To install the capture tool **IC Capture**, please start again with the dialog **Software installation** and click **Software for end users** and **IC Capture** (please find the serial number on the CD sleeve).

How to set the IP address - PC

Usually, a PC obtains its IP address automatically from the server in the network it is connected to. This is also true for The Imaging Source GigE cameras. If the network only consists of your PC and your camera there is no server and thus, both devices set the IP addresses by themselves. Some PCs need minutes for this process. In this case, we recommend to set the IP address of you PC manually. Please follow these four steps:

Step 1

Open the **Control Panel** and double click **Network Connections**:

Step 2

In **Network Connections**, select your network:

Step 3

Scroll down to and select the **Internet Protocol (TCP/IP)** and click the Properties button.

Step 4

Enter the network settings as shown on the right. Now you PC does not obtain the IP address automatically any more but is set to **169.254.0.1**.

How to set the IP address - Camera

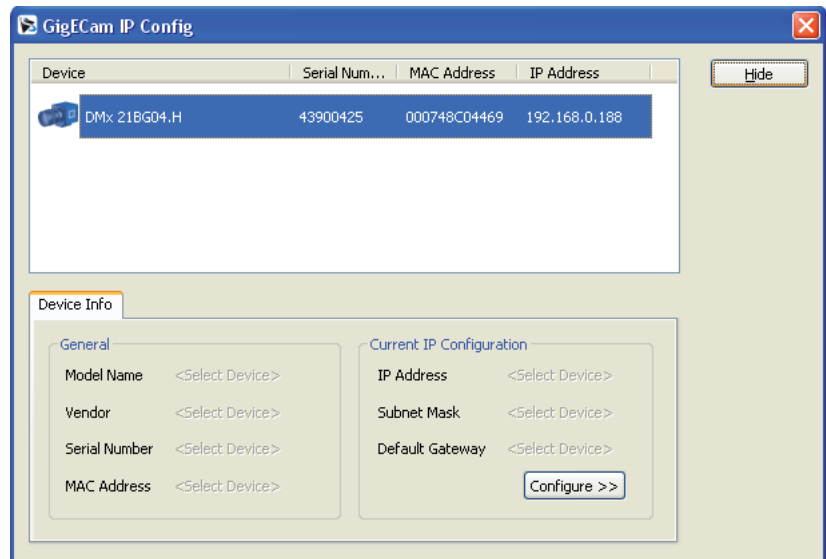

Usually The Imaging Source GigE cameras obtain their IP address from the network server. If no such server exists, they set the IP address by themselves. If you, however, prefer to set the IP address manually, please follow the next two steps:

Step 1

Open the **GigECam IP Config** tool clicking this icon in the taskbar:

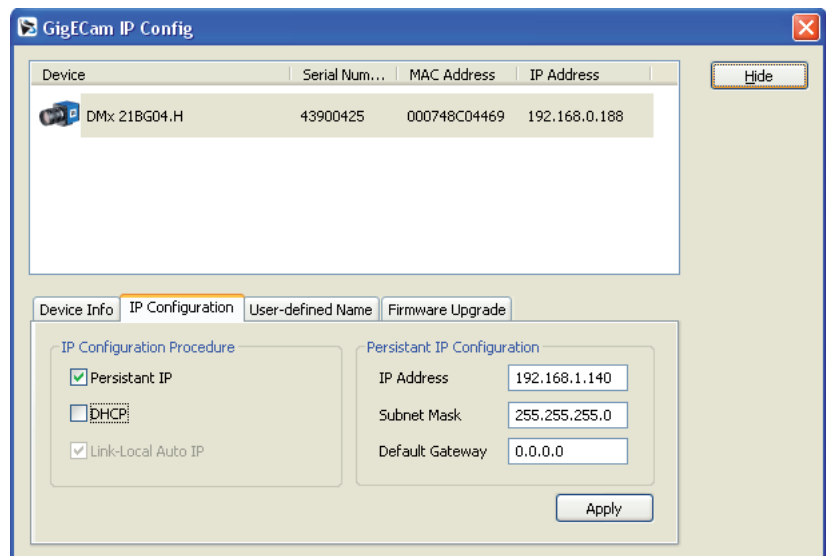

Please highlight the camera whose IP address you need to modify and click **Configure >>**.

Step 2

Click the tab **IP Configuration** check **Persistent IP**, uncheck **DHCP** and set an IP address that meets your requirements. Complete your configuration clicking **Apply**.
